<u>The Worried Axolotl</u> , a poem by Ralph Lewin.....	39

Editor's Note

The I.U. Axolotl Colony has received several requests for information on the histology of amphibian embryos, larvae, and adults. To our knowledge, no single "atlas of amphibian histology" exists. Histological information is especially useful for the characterization of mutant phenotypes and various developmental abnormalities. We would like to request, therefore, that readers send lists of references which may contain information on the histology of amphibia to the editor, for publication in the next issue of the Newsletter.
